DETAILED ACTION

Allowable Subject Matter

Claims 1-46 are allowed.

The following is an examiner's statement of reasons for allowance: prior art, U.S.

Patents # 6,094,099, # 5,216,384, # 6,734,730 B2 does not teach nor render obvious a variable gain amplifier that has, in combination with other limitations, a selectively operable shunt-shunt feedback circuit for feeding back the amplified input signal from at least one of the gain stages to the main input terminal for varying the input impedance of the variable gain amplifier, a control circuit for selecting the feedback circuit and the at least one passive shunt impedance element in response to the selected gain stage for maintaining the input impedance of the variable gain amplifier within a predetermined input impedance range; nor does it have both a first bias voltage terminal being provided to each amplifier element for receiving a first bias voltage for applying to the transconductance device, the first bias voltage being of value for minimizing the voltage dependency of the parasitic capacitance of the transconductance device when the corresponding gain stage is not selected as well as a voltage divider impedance chain, a first end of which is coupled to the main input terminal, the voltage divider impedance chain having (N-1) output taps coupled to the signal inputs of the amplifier elements of the respective ones of the gain stages from a second one to an Nth one of the N gain stages for applying the input signal to the amplifier elements of the gain stages from the second to the Nth gain stage progressively attenuated from the second gain stage to the Nth gain stage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
